

General Hardware Specifications

Crown Freight Manager Add-On software operates on Windows 2000 Professional Operating System or higher. Customers are likely to have other programs they will be utilizing with the Windows system and should provide that information to the hardware provider for further configuration recommendations.

Please make sure that the machine is in good working order (no spy ware, viruses, unnecessary running programs, updated drivers, Windows Updates, etc). Crown is not responsible for any other application on the installed machine. If an application or a malady impedes us from the correct operation of our software we will request that IT fix the machine or re-install the OS first and then re-install our application.

Note: XP Home, XP Media Center Edition, XP Media Center Edition 2005, Windows Vista Basic and Windows Vista Home Premium are **not supported** operating systems for use with the Crown Freight Manager Add-On software. These versions of Windows are not suitable for a business networked environment and provide an unstable platform for these applications.
